Stakeholder Requirements Document: LH Nautical

Lighthouse Professional: Luciano Brandao

Client/Sponsor: Gabriel Santos, Tech Lead

Business problem:

The LH Nautical is facing significant challenges related to data organization and integration, impacting its ability to make data-driven decisions. Currently, the company struggles to consolidate sales, inventory, and financial data, leading to limited visibility into performance and operational inefficiencies. Primary question: How can we transform disorganized data into structured insights to support sales analysis, customer understanding, demand forecasting, and product recommendation strategies?

Stakeholders:

- Gabriel Santos, Tech Lead
- Marina Costa, Business Manager
- Sr. Almir, Founder

Stakeholder usage details:

Gabriel Santos will use the solution to ensure proper data structure, documentation, and reproducibility of analyses. Marina Costa will use the outputs to evaluate sales performance, identify high-value customers, and optimize business decisions related to pricing, margins, and growth strategies. Sr. Almir will rely on clear and objective insights to gain confidence in data-driven decisions and support strategic direction without relying on intuition alone.

Primary requirements:

- Clean and structured datasets integrating product, sales, and customer data.
- Reliable calculation of key business metrics such as revenue, profit, and customer performance.
- Analysis of sales patterns over time, including seasonality and daily behavior.
- Identification of top-performing customers and product categories.
- A demand forecasting approach to support planning and inventory decisions.
- A recommendation system to identify related products based on customer purchasing behavior.
- Clear documentation and reproducibility of the entire data workflow.
- Visual outputs (dashboard or reports) to support business decision-making.

These requirements aim to enable LH Nautical to transition from fragmented data usage to a structured, data-driven decision-making approach.
